## FIDELITY BANK PLC NOTES TO THE FINANCIAL STATEMENTS

#### 1. General information

These financial statements are the financial statements of Fidelity Bank Plc (the "Bank"), a company incorporated in Nigeria on 19 November 1987.

The registered office address of the Bank is at Fidelity Place, 1 Fidelity Bank Close Off Kofo Abayomi Street, Victoria-Island, Lagos, Nigeria.

The principal activity of the Bank is the provision of banking and other financial services to corporate and individual customers. Fidelity Bank Plc provides a full range of financial services including investment, commercial and retail banking.

#### 2. Summary of significant accounting policies

#### 2.1 Introduction to summary of significant accounting policies

The principal accounting policies adopted in the preparation of these financial statements are set out below. These policies have been consistently applied to the period presented, unless otherwise stated.

#### 2.1.1 Basis of preparation

Statement of Compliance

The Bank's financial statements for the third quarter ending 30th September 2016 have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB").

Additional information required by national regulations is included where appropriate.

The quarterly financial statements comprise the statement of comprehensive income, the statement of financial position, the statement of changes in equity, and the notes.

The quarterly financial statements have been prepared in accordance with the going concern principle under the historical cost convention, except for financial assets and financial liabilities measured at fair value.

The quarterly financial statements are presented in Naira, which is the Bank's presentation currency. The figures shown in the financial statements are stated in Naira millions.

#### 2.1.2 SIGNIFICANT ACCOUNTING JUDGEMENTS, ESTIMATES AND ASSUMPTIONS

The preparation of the Bank's financial statements requires management to make judgements, estimates and assumptions that affect the reported amount of revenues, expenses, assets and liabilities and the accompanying disclosure, as well as the disclosure of contingent liability about these assumption and estimates that could result in outcome that require a material adjustment to the carrying amount of assets and liabilities affected in future periods.

Management discusses with the Audit Committee the development, selection and disclosure of the Bank's critical accounting policies and estimates, and the application of these policies and estimates.

#### **ESTIMATES AND ASSUMPTIONS**

The key assumption concerning the future and other key sources of estimation uncertainly at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial period, are described below. The Bank based its assumption and estimates on parameters available when the financial statements were prepared. Existing circumstances and assumption about future developments, however, may change due to market changes or circumstances beyond the control of the Bank. Such changes are reflected in the assumptions when they occur.

#### Going Concern

The Bank's management has made an assessment of its ability to continue as a going concern and is satisfied that it has the resources to continue in the business for the foreseeable future. Furthermore, management is not aware of any material uncertainties that may cast significant doubt upon the Bank's ability to continue as a going concern. Therefore, the financial statements continue to be prepared on the going concern basis.

#### Allowances for credit losses

Assets accounted for at amortised cost are evaluated for impairment on a basis described in accounting policy Note 2.7

The specific counterparty component of the total allowances for impairment applies to claims evaluated individually for impairment and is based upon management's best estimate of the present value of the cash flows that are expected to be received. In estimating these cash flows, management makes judgements about a counter party's financial situation and the net realisable value of any underlying collateral. Each impaired asset is assessed on its merits, and the workout strategy and estimate of cash flows considered recoverable are independently approved by the Credit Committee.

Collectively assessed impairment allowances cover credit losses inherent in portfolios of loans with similar economic characteristics when there is objective evidence to suggest that they contain impaired loans, but the individual impaired items cannot yet be identified. In assessing the need for collective loan loss allowances, management considers factors such as credit quality, portfolio size, concentrations, and economic factors. In order to estimate the required allowance, assumptions are made to define the way inherent losses are modelled and to determine the required input parameters, based on historical experience and current economic conditions. The accuracy of the allowances depends on how well these estimate of future cash flows for specific counterparty allowances and the model assumptions and parameters used in determining collective allowances are made.

#### Fair value of financial instruments

The determination of fair value for financial assets and liabilities for which there is no observable market price requires the use of techniques as described in accounting policy Note 2.4 (E) For financial instruments that trade infrequently and have little price transparency, fair value is less objective, and requires varying degrees of judgement depending on liquidity, concentration, uncertainty of market factors, pricing assumptions and other risks affecting the specific instrument.

#### Retirement benefit obligation

The cost of the defined benefit plan is determined using an actuarial valuation. The actuarial valuation involves making assumptions about discount rates, expected rates of return on assets, future salary increases, mortality rates and future pension increases. Due to the long-term nature of these plans, such estimates are subject to significant uncertainty.

#### **JUDGEMENTS**

In the process of applying the Bank's accounting policies, management has made the following judgements, which have significant effect on the amount recognised in the financial statements:

#### Depreciation and carrying value of property, plant and equipment

The estimation of the useful lives of assets is based on management's judgement. Any material adjustment to the estimated useful lives of items of property and equipment will have an impact on the carrying value of these items.

#### Determination of impairment of property, plant and equipment, and intangible assets

Management is required to make judgements concerning the cause, timing and amount of impairment. In the identification of impairment indicators, management considers the impact of changes in current competitive conditions, cost of capital, availability of funding, technological obsolescence, discontinuance of services and other circumstances that could indicate that impairment exists. The Bank applies the impairment assessment to its separate cash generating units. This requires management to make significant judgements and estimates concerning the existence of impairment indicators, separate cash generating units, remaining useful lives of assets, projected cash flows and net realisable values. Management's judgement is also required when assessing whether a previously recognised impairment loss should be reversed.

#### **Determination of collateral Value**

Management monitors market value of collateral in a regular basis. Management uses its experienced judgement on independent opinion to adjust the fair value to reflect the current circumstances. The amount and collateral required depend on the assessment of credit risk of the counterpart.

The Directors believes that the underlying assumptions are appropriate and that the Bank's financial statements therefore present the financial position and results fairly. The areas involving a higher degree of judgement or complexity, or areas where assumptions and estimates are significant to the financial statements, are disclosed in the notes.

#### 2.3 Foreign currency translation

#### (a) Functional and presentation currency

Items included in the financial statements of the Bank are measured using the currency of the primary economic environment in which the entity operates ("the functional currency").

The financial statements are presented in Naira millions, which is the Bank's presentation currency.

#### (b) Transactions and balances

Foreign currency transactions (i.e. transactions denominated, or that require settlement, in a currency other than the functional currency) are translated into the functional currency using the exchange rates prevailing at the dates of the transactions or valuation where items are re-measured.

Monetary items denominated in foreign currency are translated with the closing rate as at the reporting date. Non-monetary items measured at historical cost denominated in a foreign currency are translated with the exchange rate as at the date of initial recognition; non-monetary items in a foreign currency that are measured at fair value are translated using the exchange rates at the date when the fair value was determined.

Foreign exchange gains and losses resulting from the settlement of foreign currency transactions and from the translation at period-end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in the profit or loss.

In the case of changes in the fair value of monetary assets denominated in foreign currency classified as available-forsale, a distinction is made between translation differences resulting from changes in amortised cost of the security and other changes in the carrying amount of the security. Translation differences related to changes in the amortised cost are recognised in profit or loss, and other changes in the carrying amount, except impairment, are recognised in other comprehensive income.

Translation differences on non-monetary financial instruments, such as equities held at fair value through profit or loss, are reported as part of the fair value gain or loss. Translation differences on non-monetary financial instruments, such as equities classified as available-for-sale financial assets, are included in other comprehensive income.

#### 2.4 Financial assets and liabilities

In accordance with IAS 39, all financial assets and liabilities - which include derivative financial instruments - have to be recognised in the statement of financial position and measured in accordance with their assigned category.

#### A) Initial recognition and measurement

Financial instruments at fair value through profit or loss are initially recognised at fair value while transaction costs, which are directly attributable to the acquisition or issue of the financial instruments, are recognised immediately through profit or loss. Financial instruments that are not carried at fair value through profit or loss are initially measured at fair value plus transaction costs that are directly attributable to the acquisition or issue of the financial instruments.

Financial instruments are recognised or derecognised on the date that the financial instrument is delivered to or by the Bank (settlement date accounting).

The Bank does not currently apply hedge accounting.

#### B) Subsequent measurement

Subsequent to initial measurement, financial instruments are measured either at fair value or amortised cost depending on their classification.

#### C) Classification and related measurement

Management determines the classification of its financial instruments at initial recognition. Reclassification of financial assets are permitted in certain instances as discussed below.

#### i) Financial assets

The Bank classifies its financial assets in terms of the following IAS 39 categories: financial assets at fair value through profit or loss; loans and receivables; held-to-maturity financial assets; and available-for-sale financial assets.

#### a) Financial assets at fair value through profit or loss

This category comprises two sub-categories: financial assets classified as held for trading, and financial assets designated by the Bank as fair value through profit or loss upon initial recognition (the so-called "fair value option"). At the reporting dates covered by these financial statements, financial assets at fair value through profit or loss comprise financial assets classified as held for trading only. Management did not apply the fair value option to any financial assets existing at these dates.

A financial asset is classified as held for trading if it is acquired or incurred principally for the purpose of selling or repurchasing it in the near term or if it is part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit-taking. Derivatives are also categorised as held for trading unless they are designated and effective as hedging instruments.

Financial instruments included in this category are subsequently measured at fair value with gains and losses arising from changes in fair value recognised in 'Net gains / (losses) from financial instruments at fair value' in the Statement of comprehensive income. Interest income and dividend income on financial assets held for trading are included in 'Interest income' and 'Other operating income' respectively.

#### b) Loans and receivables

Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market, other than:

- those that the Bank intends to sell immediately or in the short term, which are classified as held for trading, and those that the entity upon initial recognition designates as fair value through profit or loss;
- those that the Bank upon initial recognition designates as available-for-sale; or
- those for which the holder may not recover substantially all of its initial investment, other than because of credit deterioration.

Loans and receivables are subsequently measured at amortised cost using the effective interest rate method. Interest income is included in 'Interest income' in the Statement of comprehensive income. Refer to accounting policy 2.7 for the impairment of financial assets.

#### c) Held-to-maturity financial assets

Held-to-maturity financial assets are non-derivative financial assets with fixed or determinable payments and fixed maturities that the Bank's management has the positive intention and ability to hold to maturity, other than:

- those that the Bank upon initial recognition designates as fair value through profit or loss;
- those that the Bank upon initial recognition designates as available-for-sale; or
- those that meet the definition of loans and receivables.

These financial assets are subsequently measured at amortised cost using the effective interest rate method. Interest income is included in 'Interest income' in the Statement of comprehensive income. Refer to accounting policy 2.8 for the impairment of financial assets.

#### d) Available-for-sale financial assets

Available-for-sale financial assets are non-derivatives that are either designated in this category or not classified as loans and receivables, held-to-maturity financial assets or financial assets at fair value through profit or loss. No financial assets designated as available-for-sale exist at any of the reporting dates covered by these financial statements.

Available-for-sale financial assets are subsequently measured at fair value with fair value gains and losses recognised in other comprehensive income. Interest calculated using the effective interest method is recognised in 'Interest income', with dividend income included in 'Other operating income'. When available-for-sale financial assets are sold or impaired, the cumulative gain or loss recognised in a separate reserve in equity are reclassified to profit or loss.

#### ii) Financial liabilities

Financial liabilities are classified as at fair value through profit or loss (including financial liabilities held for trading and those designated at fair value through profit or loss) and financial liabilities at amortised cost. The Bank only has financial liabilities at amortised cost.

#### a) Financial liabilities at amortised cost

Financial liabilities that are not classified as at fair value through profit or loss are measured at amortised cost using the effective interest method. Interest expense is included in 'Interest expense' in the Statement of comprehensive income.

#### D) Reclassification of financial assets

The Bank may choose to reclassify a non-derivative financial asset held for trading out of the held for trading category if the financial asset is no longer held for the purpose of selling it in the near term. Financial assets other than loans and receivables are permitted to be reclassified out of the held for trading category only in rare circumstances arising from a single event that is unusual and highly unlikely to recur in the near-term. In addition, the Bank may choose to reclassify financial assets that would meet the definition of loans and receivables out of the held for trading or available-for-sale categories if the Bank has the intention and ability to hold these financial assets for the foreseeable future or until maturity at the date of reclassification.

Reclassifications are made at fair value as of the reclassification date. Fair value becomes the new cost or amortised cost as applicable, and no reversals of fair value gains or losses recorded before reclassification date are subsequently made. Effective interest rates for financial assets reclassified to loans and receivables and held-to-maturity categories are determined at the reclassification date. Further increases in estimates of cash flows adjust effective interest rates prospectively.

#### E) Determination of fair value

At initial recognition, the best evidence of the fair value of a financial instrument is the transaction price (i.e. the fair value of the consideration paid or received), unless the fair value of that instrument is evidenced by comparison with other observable current market transactions in the same instrument, without modification or repackaging, or based on valuation techniques such as discounted cash flow models and option pricing models whose variables include only data from observable markets.

Subsequent to initial recognition, for financial instruments traded in active markets, the determination of fair values of financial assets and financial liabilities is based on quoted market prices or dealer price quotations. This includes listed equity securities and quoted debt instruments on major exchanges and broker quotes.

A financial instrument is regarded as quoted in an active market if quoted prices are readily and regularly available from an exchange, dealer, broker, industry Bank, pricing service or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis. If the above criteria are not met, the market is regarded as being inactive. Indications that a market is inactive are when there is a wide bid-offer spread or significant increase in the bid-offer spread or there are few recent transactions.

For all other financial instruments, fair value is determined using valuation techniques. In these techniques, fair values are estimated from observable data in respect of similar financial instruments, using models to estimate the present value of expected future cash flows or other valuation techniques, using inputs (for example, LIBOR yield curve, foreign exchange rates, volatilities and counterparty spreads) existing at the reporting dates.

For more complex instruments, the Bank uses internally developed models, which are usually based on valuation methods and techniques generally recognised as standard within the industry. Valuation models are used primarily to value derivatives transacted in the over-the-counter market, unlisted debt securities (including those with embedded derivatives) and other debt instruments for which markets were or have become illiquid. Some of the inputs to these models may not be market observable and are therefore estimated based on assumptions.

The output of a model is always an estimate or approximation of a value that cannot be determined with certainty, and valuation techniques employed may not fully reflect all factors relevant to the positions the Bank holds. Valuations may therefore be adjusted, where appropriate, to allow for additional factors including model risks, liquidity risk and counterparty credit risk. Based on the established fair value model governance policies, and related controls and procedures applied, management believes that these valuation adjustments are necessary and appropriate to fairly state the values of financial instruments carried at fair value in the statement of financial position. Price data and parameters used in the measurement procedures applied are generally reviewed carefully and adjusted, if necessary.

#### F) Derecognition

Financial assets are derecognised when the contractual rights to receive the cash flows from these assets have ceased to exist or the assets have been transferred and substantially all the risks and rewards of ownership of the assets are also transferred (that is, if substantially all the risks and rewards have not been transferred, the Bank tests control to ensure that continuing involvement on the basis of any retained powers of control does not prevent derecognition). Financial liabilities are derecognised when they have been redeemed or otherwise extinguished.

Collateral (shares and bonds) furnished by the Bank under standard repurchase agreements and securities lending and borrowing transactions is not derecognised because the Bank retains substantially all the risks and rewards on the basis of the predetermined repurchase price, and the criteria for derecognition are therefore not met.

Financial assets that are transferred to a third party but do not qualify for derecognition are presented in the Statement of financial position as 'Assets pledged as collateral', if the transferee has the right to sell or repledge them.

#### 2.5 Offsetting financial instruments

Financial assets and liabilities are offset and the net amount reported in the statement of financial position when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis or realise the asset and settle the liability simultaneously.

#### 2.6 Revenue recognition

#### Interest income and expense

Interest income and expense for all interest-bearing financial instruments are recognised within 'Interest income' and 'Interest expense' in the Statement of comprehensive income using the effective interest method.

The effective interest method is a method of calculating the amortised cost of a financial asset or a financial liability and of allocating the interest income or interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the Bank estimates cash flows considering all contractual terms of the financial instrument (for example, prepayment options) but does not consider future credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate, transaction costs and all other premiums or discounts. Where the estimated cash flows on financial assets are subsequently revised, other than impairment losses, the carrying amount of the financial assets is adjusted to reflect actual and revised estimated cash flows.

Once a financial asset or a group of similar financial assets has been written down as a result of an impairment loss, interest income is recognised using the rate of interest used to discount the future cash flows for the purpose of measuring the impairment loss.

#### Fees and commission income

Fees and commissions are generally recognised on an accrual basis when the service has been provided. Loan commitment fees for loans that are likely to be drawn down are deferred (together with related direct costs) and recognised as an adjustment to the effective interest rate on the loan. Loan syndication fees are recognised as revenue when the syndication has been completed and the Bank has retained no part of the loan package for itself or has retained a part at the same effective interest rate as the other participants. Commission and fees arising from negotiating, or participating in the negotiation of, a transaction for a third party, are recognised on completion of the underlying transaction.

#### Income from bonds or guarantees and letters of credit

Income from bonds or guarantees and letters of credit are recognised on a straight line basis over the life of the bond or guarantee.

#### **Dividend income**

Dividends are recognised in the Statement of Comprehensive Income in 'Other income' when the entity's right to receive payment is established.

#### 2.7 Impairment of financial assets

#### (i) Assets carried at amortised cost

The Bank assesses at the end of each reporting period whether there is objective evidence that a financial asset or a group of financial assets is impaired. A financial asset or group of financial assets is impaired and impairment losses are incurred only if there is objective evidence of impairment as a result of one or more events that occurred after the initial recognition of the asset (a 'loss event') and that loss event (or events) has an impact on the estimated future cash flows of the financial asset or group of financial assets that can be reliably estimated.

The criteria that the Bank uses to determine that there is objective evidence of an impairment loss include:

- · Delinquency in contractual payments of principal or interest:
- · Cash flow difficulties experienced by the borrower (for example, equity ratio, net income percentage of sales);
- · Breach of loan covenants or conditions;
- · Initiation of bankruptcy proceedings;
- · Deterioration of the borrower's competitive position;
- · Deterioration in the value of collateral;
- · Downgrading below investment grade level;
- · Significant financial difficulty of the issuer or obligor;
- · A breach of contract, such as a default or delinquency in interest or principal payments;
- · The lender, for economic or legal reasons relating to the borrower's financial difficulty, granting to the borrower a concession that the lender would not otherwise consider;
- · It becomes probable that the borrower will enter bankruptcy or other financial reorganisation;
- $\cdot$  The disappearance of an active market for that financial asset because of financial difficulties; and
- $\cdot$  Observable data indicating that there is an measurable decrease in the estimated future cash flows from a portfolio of financial assets since the initial recognition of those

assets although the decrease cannot yet be identified with the individual financial assets in the portfolio, including: adverse changes in the payment status of borrowers in

the portfolio; and national or local economic conditions that correlate with defaults on the assets in the portfolio.

The Bank first assesses whether objective evidence of impairment exists individually for financial assets that are individually significant, and individually or collectively for financial assets that are not individually significant. If the Bank determines that no objective evidence of impairment exists for an individually assessed financial asset, whether significant or not, it includes the asset in a group of financial assets with similar credit risk characteristics and collectively assesses them for impairment. Assets that are individually assessed for impairment and for which an impairment loss is or continues to be recognised are not included in a collective assessment of impairment.

The amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows (excluding future credit losses that have not been incurred) discounted at the financial asset's original effective interest rate. The carrying amount of the asset is reduced through the use of an allowance account and the amount of the loss is recognised in profit or loss. If a financial instrument has a variable interest rate, the discount rate for measuring any impairment loss is the current effective interest rate determined under the contract.

The calculation of the present value of the estimated future cash flows of a collateralised financial asset reflects the cash flows that may result from foreclosure less costs for obtaining and selling the collateral, whether or not foreclosure is probable.

For the purposes of a collective evaluation of impairment, financial assets are Banked on the basis of similar credit risk characteristics (i.e. on the basis of the Bank's grading process that considers asset type, industry, geographical location, collateral type, past-due status and other relevant factors). Those characteristics are relevant to the estimation of future cash flows for Banks of such assets by being indicative of the debtors' ability to pay all amounts due according to the contractual terms of the assets being evaluated.

Future cash flows in a group of financial assets that are collectively evaluated for impairment are estimated on the basis of the contractual cash flows of the assets in the group and historical loss experience for assets with credit risk characteristics similar to those in the group. Historical loss experience is adjusted on the basis of current observable data to reflect the effects of current conditions that did not affect the period on which the historical loss experience is based and to remove the effects of conditions in the historical period that do not currently exist.

Estimates of changes in future cash flows for Banks of assets are reflected and directionally consistent with changes in related observable data from period to period (for example, changes in unemployment rates, property prices, payment status, or other factors indicative of changes in the probability of losses in the Bank and their magnitude). The methodology and assumptions used for estimating future cash flows are reviewed regularly by the Bank to reduce any differences between loss estimates and actual loss experience.

When a loan is uncollectible, it is written off against the related provision for loan impairment. Such loans are written off after all the necessary procedures have been completed and the amount of the loss has been determined.

Impairment charges on financial assets are included in profit or loss within 'Impairment charges'.

#### (ii) Available-for-sale financial assets

Available-for-sale financial assets are impaired if there is objective evidence of impairment, resulting from one or more loss events that occurred after initial recognition but before the reporting date, that have an impact on the future cash flows of the asset. In addition, an available-for-sale equity instrument is generally considered impaired if a significant or prolonged decline in the fair value of the instrument below its cost has occurred. Where an available-for-sale asset, which has been re-measured to fair value directly through equity, is impaired, the impairment loss is recognised in profit or loss. If any loss on the financial asset was previously recognised directly in equity as a reduction in fair value, the cumulative net loss that had been recognised in equity is transferred to profit or loss and is recognised as part of the impairment loss. The amount of the loss recognised in profit or loss is the difference between the acquisition cost and the current fair value, less any previously recognised impairment loss.

If, in a subsequent period, the amount relating to an impairment loss decreases and the decrease can be linked objectively to an event occurring after the impairment loss was recognised in the income statement, where the instrument is a debt instrument, the impairment loss is reversed through profit or loss. An impairment loss in respect of an equity instrument classified as available-for-sale is not reversed through profit or loss but accounted for directly in equity.

#### 2.8 Impairment of non-financial assets

Assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. Additionally, intangible assets that have an indefinite useful life and are not subject to amortisation are tested annually for impairment. An impairment loss is recognised for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less costs to sell and value in use. For the purpose of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash inflows (cash-generating units). The impairment test may also be performed on a single asset when the fair value less cost to sell or the value in use can be determined reliably. Non-financial assets other than goodwill that suffered impairment are reviewed for possible reversal of the impairment at each reporting date.

Impairment losses recognised in prior periods are assessed at each reporting date for any indications that the loss has decreased or no longer exists. An impairment loss is reversed if there has been a change in the estimates used to determine the recoverable amount. An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortisation, if no impairment loss had been recognised. An impairment loss in respect of goodwill is not reversed.

#### 2.9 Share-based payments

The Bank operates a share scheme which enables employees of the Bank to acquire shares in the Bank. The shares are bought on loan account and the fair value is calculated as the difference between the price paid and the fair value of the shares. The share vests immediately and the post vesting conditions are included in the valuation.

#### 2.10 Statement of cash flows

The Statement of cash flows shows the changes in cash and cash equivalents arising during the year from operating activities, investing activities and financing activities. Cash and cash equivalents include highly liquid investments.

The cash flows from operating activities are determined by using the indirect method. Net income is therefore adjusted by non-cash items, such as measurement gains or losses, changes in provisions, as well as changes from receivables and liabilities. In addition, all income and expenses from cash transactions that are attributable to investing or financing activities are eliminated.

The cash flows from investing and financing activities are determined by using the direct method. The Bank's assignment of the cash flows to operating, investing and financing category depends on the Bank's business model (management approach). Interest and dividends received and interest paid are classified as operating cash flows, while dividends paid are included in financing activities.

#### 2.11 Cash and cash equivalents

Cash and cash equivalents comprise balances with less than three months' maturity from the date of acquisition, including cash in hand, deposits held at call with banks and other short-term highly liquid investments with original maturities of three months or less.

For the purposes of the statement of cash flows, cash and cash equivalents include cash and non-restricted balances with central bank.

#### 2.12 Leases

Leases are divided into finance leases and operating leases.

- (a) The company is the lessee
- (i) Operating lease

Leases in which a significant portion of the risks and rewards of ownership are retained by another party, the lessor, are classified as operating leases. Payments, including prepayments, made under operating leases (net of any incentives received from the lessor) are charged to the income statement on a straight-line basis over the period of the lease. When an operating lease is terminated before the lease period has expired, any payment required to be made to the lessor by way of penalty is recognised as an expense in the period in which termination takes place.

#### (ii) Finance lease

Leases of assets where the Bank has substantially all the risks and rewards of ownership are classified as finance leases. Finance leases are capitalised at the lease's commencement at the lower of the fair value of the leased property and the present value of the minimum lease payments. Each lease payment is allocated between the liability and finance charges so as to achieve a constant rate on the finance balance outstanding. The corresponding rental obligations, net of finance charges, are included in 'Deposits from banks' or 'Deposits from customers' depending on the counter party. The interest element of the finance cost is charged to the income statement over the lease period so as to produce a constant periodic rate of interest on the remaining balance of the liability for each period. The investment properties acquired under finance leases are measured subsequently at their fair value.

- (b) The company is the lessor
- (i) Operating lease

When assets are subject to an operating lease, the assets continue to be recognised as property and equipment based on the nature of the asset. Lease income is recognised on a straight line basis over the lease term.

Lease incentives are recognised as a reduction of rental income on a straight-line basis over the lease term.

#### (ii) Finance lease

When assets are held subject to a finance lease, the related asset is derecognised and the present value of the lease payments (discounted at the interest rate implicit in the lease) is recognised as a receivable. The difference between the gross receivable and the present value of the receivable is recognised as unearned finance income. Lease income is recognised over the term of the lease using the net investment method (before tax), which reflects a constant periodic rate of return.

#### 2.13 Property, plant and equipment

Land and buildings comprise mainly branches and offices. All property and equipment used by the Bank is stated at historical cost less accumulated depreciation and accumulated impairment losses, if any Historical cost includes expenditure that is directly attributable to the acquisition of the items.

Subsequent expenditures are included in the asset's carrying amount or are recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Bank and the cost of the item can be measured reliably. The carrying amount of the replaced part is derecognised. All other repair and maintenance costs are charged to 'Other operating expenses' during the financial period in which they are incurred.

Land included in leasehold land and buildings is not depreciated. Depreciation of other assets is calculated using the straight-line method to allocate their cost to their residual values over their estimated useful lives, as follows:

- Leasehold buildings: Depreciated over the lease period
- Leasehold improvements: The lower of useful life and lease period
- Motor vehicles: 4 yearsFurniture and fittings: 5 yearsComputer equipment: 5 years

-Office equipment: 5 years

The assets' residual values and useful lives are reviewed annually, and adjusted if appropriate.

Gains and losses on disposals are determined by comparing the proceeds with the carrying amount. These are included in 'Other operating expenses' in profit or loss.

Construction cost and improvements in respect of offices is carried at cost as capital work in progress. On completion of construction or improvements, the related amounts are transferred to the appropriate category of property and equipment. Payments in advance for items of property and equipment are included as Prepayments in "Other Assets" and upon delivery are reclassified as additions in the appropriate category of property and equipment.

#### 2.14 Intangible assets

Costs associated with maintaining computer software programmes are recognised as an expense as incurred. Development costs that are directly attributable to the design and testing of identifiable and unique software products controlled by the Bank, are recognised as intangible assets when the following criteria are met:

- · it is technically feasible to complete the software product so that it will be available for use;
- · management intends to complete the software product and use or sell it;
- there is an ability to use or sell the software product;
- $\cdot$  it can be demonstrated how the software product will generate probable future economic benefits;
- adequate technical, financial and other resources to complete the development and to use or sell the software product are available; and
- the expenditure attributable to the software product during its development can be reliably measured.

Subsequent expenditure on computer software is capitalised only when it increases the future economic benefits embodied in the specific asset to which it relates.

Direct computer software development costs recognised as intangible assets are amortised on the straight-line basis over 5 years and are carried at cost less any accumulated amortisation and any accumulated impairment losses.

#### 2.15 Income taxation

The tax expense for the period comprises current and deferred tax. Tax is recognised in arriving at profit or loss, except to the extent that it relates to items recognised in other comprehensive income or directly in equity. In this case, the tax is also recognised in other comprehensive income or directly in equity, respectively.

#### (a) Current income tax

The current income tax charge is calculated on the basis of the applicable tax laws enacted or substantively enacted at the reporting date in the respective jurisdiction.

#### (b) Deferred income tax

Deferred income tax is recognised, using the liability method, on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the financial statements. Deferred income tax is determined using tax rates (and laws) that have been enacted or substantially enacted by the reporting date and are expected to apply when the related deferred income tax asset is realised or the deferred income tax liability is settled.

Deferred income tax assets are recognised only to the extent that it is probable that future taxable profit will be available against which the temporary differences can be utilised.

Deferred income tax is provided on temporary differences arising from investments in subsidiaries and associates, except where the timing of the reversal of the temporary difference is controlled by the Bank and it is probable that the difference will not reverse in the foreseeable future.

Deferred income tax assets and liabilities are offset when there is a legally enforceable right to offset current tax assets against current tax liabilities and when the deferred income tax assets and liabilities relate to income taxes levied by the same taxation authority on either the same taxable entity or different taxables entities where there is an intention to settle the balance on a net basis.

#### 2.17 Provisions

Provisions for restructuring costs and legal claims are recognised when: the Bank has a present legal or constructive obligation as a result of past events; it is more likely than not that an outflow of resources will be required to settle the obligation; and the amount has been reliably estimated. The Bank recognises no provisions for future operating losses.

#### 2.18 Financial guarantee contracts

A financial guarantee contract is a contract that requires the Bank (issuer) to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument. Such financial guarantees are given to banks, financial institutions and other bodies on behalf of customers to secure loans, overdrafts and other banking facilities.

Financial guarantee liabilities are initially recognised at fair value, which is generally equal to the premium received, and then amortised over the life of the financial guarantee. Subsequent to initial recognition, the financial guarantee liability is measured at the higher of the present value of any expected payment, when a payment under the guarantee has become probable, and the unamortised premium.

#### 2.19 Share capital

#### (a) Share issue costs

Incremental costs directly attributable to the issue of new shares or options or to the acquisition of a business are shown in equity as a deduction, net of tax, from the proceeds.

#### (b) Dividends on ordinary shares

Dividends on ordinary shares are recognised in equity in the period in which they are approved by the Bank's shareholders.

Dividends for the year that are declared after the date of the Statement of financial position are dealt with in the subsequent events note.

Dividends proposed by the Directors but not yet approved by members are disclosed in the financial statements in accordance with the requirements of the Company and Allied Matters Act.

#### 2.20 Comparatives

Except when a standard or an interpretation permits or requires otherwise, all amounts are reported or disclosed with comparative information. Where IAS 8 applies, comparative figures have been adjusted to conform with changes in presentation in the current year.

#### 3.0 Segment Reporting

IFRS 8 requires an entity to report financial and descriptive information about its reportable segments, which are operating segments or aggregations of operating segments that meet specified criteria. Operating segments are components of an entity about which seperate financial information is available that is evaluated regularly by the chief operating decision-maker in deciding how to allocate resources and in assessing performance. The bank has determined the (Executive Committe) as its chief operating decision maker.

IFRS 8.20 states that an entity shall diclose information to enable users of its financial statements to evaluate the nature and financial effects of the types of business activities in which it engages and the economic environments in which it operates. Following the management approach to IFRS 8, operating segments are reported in accordance with the internal reports provided to the Bank's Managing Director (the chief operating decision maker). The fllowing summary describes each of the bank's reportable segments.

#### Retail banking

The retail banking segment offers a comprehensive range of retail, personal and commercial services to individuals, small and medium business customers including a variety of E-Business products to serve the retail banking segment.

#### Corporate banking

The corporate banking segment offers a comprehensive range of commercial and corporate banking services to the corporate business customers including other meduim and large business customers. The segment covers Power and infrastructure, Oil and Gas Upstream and Downstream, Real Estate, Agro-Allied and other industries.

#### Investment banking

The bank's investment banking segment is involved in the funding and management of the bank's securities, trading and investment decisions on asset management with a view of maximising the bank's shareholders returns.

#### **Public Sector**

The Public sector offers a wide variety to governments of various levels including parastatals, ministries, departments and other agencies.
